Announcements

This document provides an overview of the new features, resolved issues, and known issues in the FireEye Endpoint Security Host Management 1.2.1 release.

Upgrade

Use the Endpoint Security Module Administration page to upgrade the Host Management module.

New Features

The following new features are now available in Host Management v1.2.1

- All modules now report information in the Host Management grid. Previously only Process Tracker reported it's version and status in the Host Management Grid. The Host Management Grid will now dynamically add optional columns as modules are enabled on your endpoints. Please use the column selector to add the Module Columns to your grid view.

Fixed Endpoint Security Host Management Module Issues

The following issues were resolved in the Host Management 1.2.1 Release.

The relevant issue tracking numbers for each item are included in parentheses.

- Default logging level is DEBUG. This issue has been resolved. (ENDPT-67489)
- Host counts in host management grid more than the count in All Hosts. This issue has been resolved. (ENDPT-62844)
- Online/Offline host calculation incorrect. This issue has been resolved. (ENDPT-62544)
